

### Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

### Listing of Claims:

1. (currently amended) An arrangement for navigation to predetermined destinations within a search area, which is divided up by means of a linear system of coordinates into coordinate fields, wherein, by means of automatic positioning at predetermined time intervals, that coordinate field is determined in which the arrangement is situated, wherein the arrangement displays to a user, who has input one of the predetermined destinations into the arrangement, navigation information, wherein the navigation information includes:

a description of the current coordinate field; and

a description of the next coordinate field for reaching the destination;

wherein the navigation information is obtained directly from a data record in a

database ~~without having to calculate a route, and~~

~~wherein no navigation-related calculation is performed using at least one data record in the database to obtain the navigation information.~~

2. (original) An arrangement as claimed in claim 1, characterized in that automatic positioning is performed by means of the Global Positioning System.

3. (original) An arrangement as claimed in claim 1, characterized in that the coordinate system comprises a linear system of coordinates with x, y coordinates which divides the search area into coordinate fields of 50 meters by 50 meters.

4. (original) An arrangement as claimed in claim 1, characterized in that the database is situated locally in the arrangement.

5. (original) An arrangement as claimed in claim 1, characterized in that the database is situated in a central memory/server, which the arrangement accesses by means of a radio link.

6. (original) An arrangement as claimed in claim 5, characterized in that the arrangement is located in a cell phone.

7. (original) An arrangement as claimed in claim 5, characterized in that the database is provided centrally for a plurality of arrangements and users.

8. (previously presented) An arrangement as claimed in claim 4, characterized in that the database is provided individually for one arrangement and the users thereof.

9. (previously presented) An arrangement as claimed in claim 7, characterized in that a user of the arrangement may record in the database personal destinations and enter him/herself in the data records descriptions for the current coordinate field and the next coordinate field to be located in order to reach the destination.

10. (currently amended) An arrangement for navigation to predetermined destinations within a search area, which is divided up by means of a linear system of coordinates into coordinate fields, wherein, by means of automatic positioning at predetermined time intervals, that coordinate field is determined in which the arrangement is situated, wherein the arrangement displays to a user, who has input one of the predetermined destinations into the arrangement, navigation information, wherein the navigation information ~~only~~ includes:

a description of the current coordinate field; and

a description of the next coordinate field for reaching the destination;

wherein the navigation information is obtained directly from a data record in a database; and

wherein no navigation related calculation is performed using at least one data

record in the database to obtain the navigation information, characterized in that the database is situated in a central memory/server, which the arrangement accesses by means of a radio link.

11. (previously presented) An arrangement as claimed in claim 10, characterized in that automatic positioning is performed by means of the Global Positioning System.

12. (canceled)

13. (canceled)

14. (previously presented) An arrangement as claimed in claim 13, characterized in that the database is provided centrally for a plurality of arrangements and users.

15. (canceled)

16. (previously presented) An arrangement as claimed in claim 14, characterized in that a user of the arrangement may record in the database personal destinations and enter him/herself in the data records descriptions for the current coordinate field and the next coordinate field to be located in order to reach the destination.

17. (currently amended) An arrangement for navigation to predetermined destinations within a search area, which is divided up by means of a linear system of coordinates into coordinate fields, wherein, by means of automatic positioning at predetermined time intervals, that coordinate field is determined in which the arrangement is situated, wherein the arrangement displays to a user, who has input one of the predetermined destinations into the arrangement, navigation information, wherein the navigation information includes:

- a description of the current coordinate field; and

- a description of the next coordinate field for reaching the destination;

- wherein the navigation information is obtained directly from a data record in a

database; and

wherein no navigation related calculation is performed using at least one data record in the database to obtain the navigation information, ~~characterized in that the database is situated locally in the arrangement~~ characterized in that a user of the arrangement may record in the database personal destinations and enter him/herself in the data records descriptions for the current coordinate field and the next coordinate field to be located in order to reach the destination.

18. (previously presented) An arrangement as claimed in claim 17, characterized in that automatic positioning is performed by means of the Global Positioning System.

19. (previously presented) An arrangement as claimed in claim 17, characterized in that the coordinate system comprises a linear system of coordinates with x, y coordinates which divides the search area into coordinate fields of 50 meters by 50 meters.

20. (canceled)

21. (previously presented) An arrangement as claimed in claim 10, characterized in that the coordinate system comprises a linear system of coordinates with x, y coordinates which divides the search area into coordinate fields of 50 meters by 50 meters.

22. (canceled)

23. (new) An arrangement as claimed in claim 10, characterized in that the arrangement is located in a cell phone.

24. (new) An arrangement as claimed in claim 17, characterized in that the database is situated locally in the arrangement.

25. (new) An arrangement as claimed in claim 17, characterized in that the database is situated in a central memory/server, which the arrangement accesses by means of a radio link.
